### DECK SYSTEM FOR CAST IN-SITU SLABS

#### Wooden I-Beam (Wooden Girder H20)

- Suitable for shuttering any shape of reinforced concrete (R.C) slabs.
- The number of jacks can be reduced by 50%.

**PASCHAL-DECK is a flexible slab Formwork system consisting of three main components.**

1. Plywood
2. Wooden I-beam (H20 girder)
3. Prop.

The Formwork can be used for different slab thickness. The plywood is supported by the H20 girders (here cross girders). The same timber girders are also used as the main girder to support the cross girders. Support for the main girders is achieved by the props. Depending on the load the single parts (girders, props) can be positioned at the statically required distance (see table).

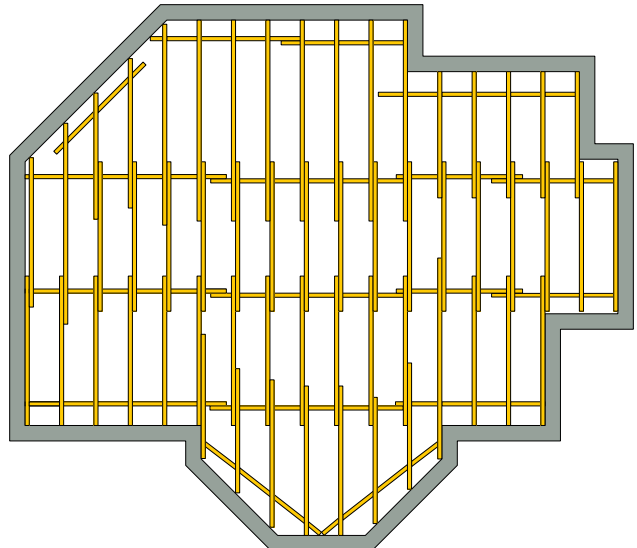

The flexibility in longitudinal direction of the girders (main and cross girders) is achieved by overlapping of the exiting girders.

The static details for the H20 girders are:

Permissible bending moment:  $m = 5.0 \text{ kNm}$ .

Permissible transverse Force:  $Q = 11 \text{ KN}$ .

**Circular Columns:**

- Half and half makes a perfect column. The big key bolt simply turns two identical steel half shells into a perfect round .10 minutes & the column is ready for concreting.
- No risk: Guaranteed to withstand large pressure loads & will not leak at the joints.
- Open it, and paint it! No needs for plastering column result are better & overall cost is 50% cheaper than wood due to the savings in labour charges.
